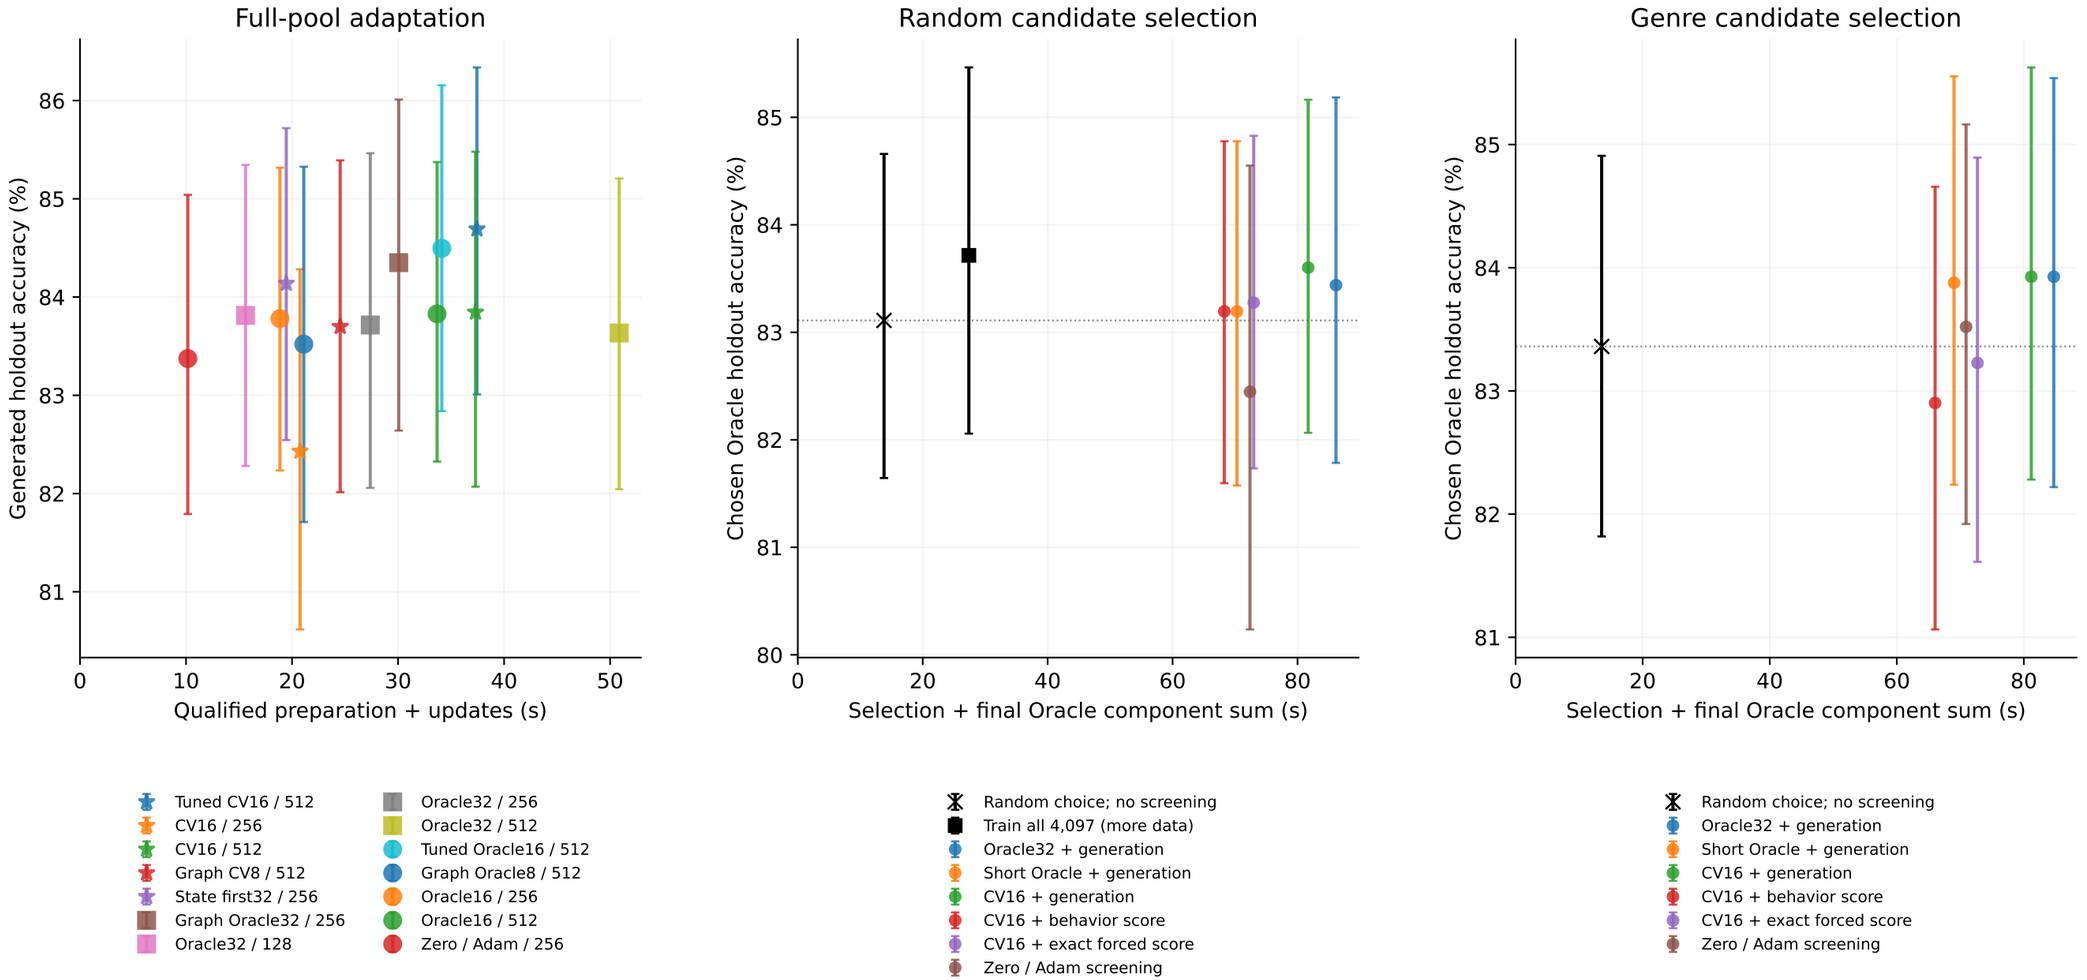
Frozen recipes and new warmup starts · Qwen2.5-1.5B / MNLI



95% intervals: paired start/source-group bootstrap; only three starts. Full-pool times use three exact-weight replays per start.
Selection x-axes are component estimates, not measured end-to-end latency; final chosen Oracle training is included.
The whole-pool control trains on 4,097 examples; each candidate uses 1,024. Offline fitting, target warmup and unrecorded transitions are additional.
Evaluation uses MNLI training-population group holdouts, not official validation.
